

50mL Magnetic Tube Dock (MTD-50)

Model # A4101

WAVESENSE

Intended Use:

For In Vitro Diagnostic Use

This product is intended for the recovery/enrichment of magnetic particles from biological fluids and tissue culture.

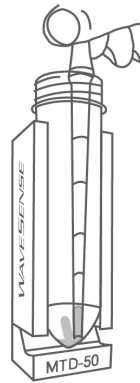

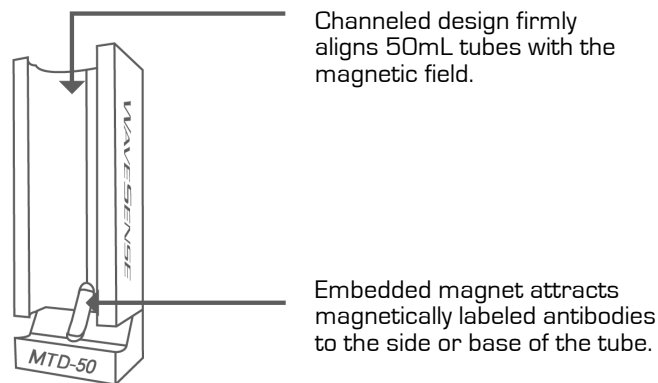

Description:

The MTD-50 is a reusable magnetic dock containing a single powerful neodymium permanent magnet suitable for isolating submicron and micron paramagnetic particles. It can be used whenever it is desirable to debulk specimens laden with debris, bacteria, mucous, and dense background cell populations typically found in cell pellets obtained from urine, blood, bone marrow, and tissue homogenates.

Supplied As:

Catalog #	Contains
A4101-1	1 Each
A4101-5	5 Pack

Featured Components:

Storage:

Store dry at room temperature.

Compatible Accessories (not included):

- Standard 50mL conical tubes (available from multiple suppliers)

Material Safety Data:

Contains plastic components and magnets. In the event of breakage, wear gloves and eye protection for clean up as some pieces may be sharp and could cause injury. Keep away from electronics or cards with magnetic strips.
